

Test and DevOps Engineer

We are seeking a skilled and motivated Test and DevOps Engineer to join our dynamic team. As a Test and DevOps Engineer, you will play a critical role in ensuring the quality, reliability, and operational efficiency of our internet networking infrastructure solutions.

Responsibilities:

- Develop and implement comprehensive test plans and strategies for internet networking infrastructure solutions, covering both functional and non-functional aspects.
- Design, develop, and execute automated test scripts to validate the performance, functionality, and interoperability of the networking infrastructure components.
- Conduct thorough system-level testing, including integration testing, regression testing, and performance testing, to identify and report any issues or defects.
- Collaborate closely with development teams to ensure testability and quality considerations are integrated into the software development process.
- Implement and maintain continuous integration and delivery (CI/CD) pipelines to enable efficient and automated software deployment and release management.
- Work closely with cross-functional teams to define and establish operational processes, monitoring tools, and infrastructure for efficient deployment and ongoing management of the networking infrastructure solutions.
- Monitor and analyze system performance, identifying opportunities for optimization and scalability improvements.
- Collaborate with stakeholders to gather requirements and provide technical expertise in designing, deploying, and managing the testing and operational environments.

Requirements:

- Relevant engineering degree.
- Proven experience as a Test Engineer, DevOps Engineer, or similar role, with a focus on internet networking infrastructure.
- Strong understanding of networking protocols, standards, and technologies.
- Experience with test automation frameworks and tools, such as Cypress, PyTest, or similar.
- Proficiency in scripting languages such as Python, Bash/Shell Scripting.
- Hands-on experience with CI/CD pipelines, version control systems, and configuration management tools.
- Familiarity with containerization technologies.
- Solid knowledge of Linux-based operating systems and networking fundamentals.
- Strong analytical and problem-solving skills, with the ability to work independently and as part of a team.
- Excellent communication and collaboration skills, with the ability to effectively convey technical concepts to both technical and non-technical stakeholders.
- Join InCoax Networks and contribute to the development and operational excellence of our internet networking infrastructure solutions. Take on a pivotal role in ensuring the quality, reliability, and scalability of our products. Apply now with your updated resume and a cover letter highlighting your relevant experience and accomplishments.
